

## Struktur des Kommando-Interpreters

### Modul: Command Interpreter

```
+ void Init (...)  
+ int Process (...)  
+ void Print (...)  
+ TParams GetParams ()  
- lPBuf Chars  
- lCommands  
  
int u 4711 '\n' --> bearbeiten  
modul interner Puffer
```

### Modul: Command Table

TCmd Table		
Cmd Help	"help"	"show help text"
...	...	...
Cmd Param AddIns	"addins"	"....."
∅	∅	∅

+ TCmd Table\* GetCmd Table ()  
- int Cmd Help ()  
:  
- int CmdAddIns ()

### Anwendung:

```
int main (...) {  
    ↴ ESC  
    ↪ Process (ch1)
```

funktion  
pointer

int pulschar (int) ... aus <stdio.h>
